

# STUDIO STAGE THEATER SERIES

*The Studio, Stage & Theater Series is simply the best power distribution available to the entertainment professional. Our innovative designs produce the smallest, lightest, most durable, and safest models used in the industry. AC Power Distribution's SST Series is the preferred choice by most major studios and rental houses in Hollywood and beyond. Take a look at the features that make our distro take center stage!*

## Certifications

All models are Type 1 Enclosures and select models are available with an optional Type 3R Outdoor rating. All are UL Listed for USA and Canada by Underwriter Labs, not a 3rd party testing house.

## Guaranteed Durability

Built to withstand the roughest crews! Heavy duty over-hanging Guard Straps add a further degree of protection to an already strong chassis. We also recess all breakers, receptacles, indicator lights, etc...This ensures lasting reliability and virtually eliminates damaged components. Heavy duty hardware, handles, stainless steel fasteners, and rugged anodized finish means your investment will perform for years. Plus our 2-year limited warranty is our commitment to quality!

## Superior Design

**We originated it - others copy it!**

We use .090 aluminum to create an extremely strong yet light weight, fully grounded chassis. Our flow-thru designs keep all feeder & branch circuits in the same direction eliminating cable clutter in all four directions. All models are designed to operate in a horizontal "Low Profile" or vertical "Extra Small Footprint" orientation. Its like having two designs in one! Large stages or narrow hallways & catwalks, you'll never be tripping over your power distribution.

## Producing The Best!

We use only the highest quality components such as 100% Rated hydraulic high in-rush, switchable Heinemann™ mini-circuit breakers with a minimum 10k AIC for all branch circuits. Solid bus-bar construction, high temp wire, redundant locking wire terminations, neon indicator lights, fused test jacks & hospital grade duplexes headline our performance. And with supporting acts from quality brands such as ABB™, Hubbell™, Bates™, Camlok™, CL™, ProSeries™, ProPin™ and more.....means the show will always go on!

# And The Technical Award Goes To...

Our unique features are designed to make your job safer and easier.

Our one of a kind self closing flush-mount safety covers on all Camlock type receptacles. No need for wasting gaffers tape or crutch tips.

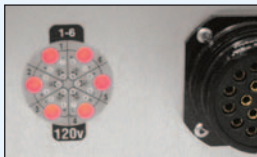

## A Double feature

Featuring the Double Ground. No need to worry about whose cable package you're using - Straight or Reverse Ground? The solution is on the box & the suicide adapter can stay in the truck!

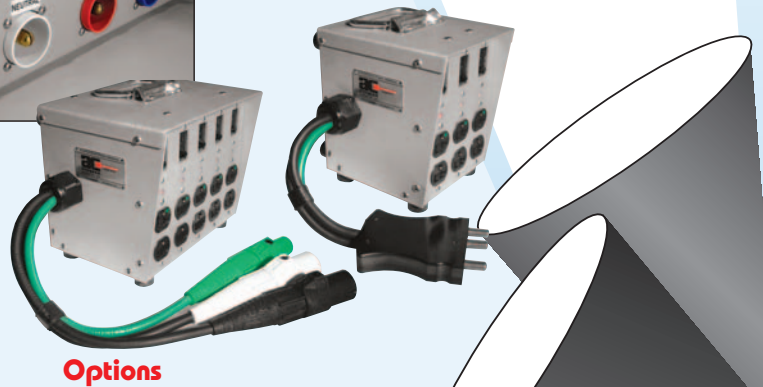

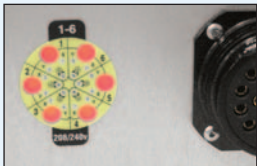

## Customize & Identify your equipment with your own personal touch.

Guard Straps (CF, ML, LF, CJ models) and Lids on (LB models) can be anodized to your companies color or theme. We offer many standard colors in stock and custom colors are also available.

All breakers are located adjacent to its receptacle or clearly labeled nearby. No more hunting for the correct breaker on the other side of the box. And we're proud to be the first manufacturer to offer a complete UL Listed pin out indicator system for both 120v & 208/240v 19pin receptacles. Never worry what your plugging a breakout into.

## Options

Certain models have options such as Locking Pin Input/Flow-Thru, Feeder Tails in lieu of Inlets, & 3R Outdoor Rating.

Most boxes are designed to accept "Hard Threefers" eliminating the need for jumpers to split a feeder run at the distro box.

Specifications subject to changes.

The Studio, Stage & Theater Series has something for any performance. Check out our cast of categories for your next production:

- Stage Pin Distro
- Edison Distro
- 19pin (Socapex™ Type) Distro
